

TRANSITION OS · MODULE 1

Workbook

Print it, or type straight into it. Five pages holding the things the program on screen deliberately does not.

What you would not type into software, and what you answer more than once. Nobody reads this but you.

0 Start ☐	1 Ground ☐	2 Explore ☐	3 Connect ☐	4 Translate ☐	5 Test ☐	6 Leap ☐	7 After ☐

How to use this

Three rules.

- Do the lesson on screen first. The screen does the arithmetic, the sorting and the ranking, and it keeps your answers. Nothing in here repeats it.
- These pages hold what a program should not. What you would not type into software, and what you answer again at weeks 6 and 12.
- Write badly. Fragments, half-sentences, a list. If you catch yourself drafting sentences, you have switched into work mode, and this is not work.

WHAT'S IN HERE

Weeks 1, 6 and 12 The same five questions, three times	
The sentence you tell yourself The one underneath the sunk-cost maths	
The list you would not type Everything you want to leave, unsoftened	
What you will miss The part every exit story has	
Tell one person Who, when, and what they said back	

The sheets you take into a room with another person, the twenty-minute conversation, the interview page and the offer page, come with the full program.

WEEKS 1, 6 AND 12

The same five questions, three times

The screen keeps your current answer. This page keeps all three, and the distance between them is the part worth seeing.

	Week 1	Week 6	Week 12
Date			
The stage you are in			
Bad workplace, bad fit, or bad season			
The path you would name today			
Your pay floor			

Where you are going, in one sentence. Write a new one each time rather than editing the old one.

Three sentences by week twelve. The first one is usually about leaving and the last one usually is not.

MODULE 1 · THE SUNK COST

The sentence you tell yourself

The calculator on screen handles the years and the money. This is for the sentence underneath, which is the part that actually keeps people in the building.

Write it exactly as it sounds in your head. Not the reasonable version.

It usually starts with “after all that” or “I should be able to”.

“I know it's the sunken cost fallacy but it's so hard to quit after putting so much time, money, and effort into this career.” an SLP, r/slp

Who taught you that sentence? A supervisor, a cohort, a parent, yourself at twenty-four.

What would you say to a CF who said it to you, word for word?

People are consistently kinder to a hypothetical CF than to themselves. Use the kinder version.

MODULE 1 · THE CHECKPOINT

The list you would not type into a program

The screen asks for the tidy version. Write the untidy one here, because the untidy one is the accurate one.

Everything you want to leave. Names, days, specific meetings, the thing you have never said out loud. Do not soften it.

Nobody reads this. That is the entire reason it is on paper and not in the app.

Read it back, and mark the three that would still be true in a different building.

Those three are about the work. Everything else is about this job, and that is a different problem with a faster fix.

MODULE 1 · WHAT YOU KEEP

What you will miss

Every exit story has a version of this page, and skipping it is what sends people back.

Finish the sentence: I will miss being the person who ...

"I've taken a long time to grieve the loss of who I was in my previous role." a comment on a former SLP's essay about leaving

Which part of that goes with you into any job? A moment, a person, a session. Be specific.

Which part only exists in a clinic, and what will you do about that outside work?

MODULE 1 · LESSON 7

Tell one person

The smallest possible disclosure, and the first page here that involves somebody else.

Who Not a colleague, if you can avoid it	
When A date, not “soon”	
What you plan to say One sentence	

What you actually said, and what they said back.

Fill this in afterwards. People are almost always less surprised than you expect them to be.

--

What changed for you in the hour after.

--
